

ABSTRACT

A support system for supporting a product for retail display comprises an accessory, a rear portion, a front portion, and a magnetic
5 portion. The accessory is adapted to support the product for retail display. The front portion supports the accessory and is rigidly connected to the rear portion. The magnetic portion is adapted rigidly connected to the rear portion. When the rear portion extends at least partly along a top surface of a metal structure, the front portion extends at least partly along a display
10 surface thereof. The rear portion is supported by the top surface of the metal structure to transfer to the metal structure downward loads on the front portion. The magnetic portion is magnetically attracted to the top surface of the metal structure to inhibit movement of the front portion away from the display surface.
